BREAKING: Fifty-eight (58%) percent of coronavirus deaths in August 2022 were people who were vaccinated or boosted, according to an analysis conducted for The Health 202 by Cynthia Cox, vice president at the Kaiser Family Foundation. <https://www.WashingtonPost.com/politics/2022/11/23/vaccinated-people-now-make-up-majority-covid-deaths/> Citing: <https://Data.CDC.gov/Public-Health-Surveillance/Rates-of-COVID-19-Cases-or-Deaths-by-Age-Group-and/d6p8-wqjm>

🔍 INVESTIGATIVE Reporter, Gordon Wayne Watts asks: Does this mean that vaccines are ineffective and/or harmful?

ANSWERS:

According to USA FACTS, at <https://UsaFacts.org/visualizations/covid-vaccine-tracker-states> we see that:

"At least 262,908,216 people or 79% of the population have received at least one dose.

Overall, 224,113,439 people or 68% of the population are considered fully vaccinated.

Additionally, 108,806,974 people or 33% of the population have received a booster dose."

ANALYSIS: If vaccines were 100% ineffective (read: placebo doses of, say, harmless sugar-water electrolytes, like in a standard IV), then you'd expect 79% of all covid cases to come from "vaccinated" people, since that's they'd have no more and no less protection than unvaccinated folk. However, only 58% of all COVID-19 cases are from that cohort (group under 🔍 investigation and research). Thus, we can infer the vaccines cut the strength/efficacy of the virus down to about 73.41772152% of their strength otherwise, all other factors being equal.

CONCLUSION: The various Covid-19 vaccines, at 27% effective (with three signs figures used in final calculation, 100.0% - minus- 73.4% =equals= only 26.6% reduction in COVID infection, and with rumoured side-effects in a small percentage of people) are NOT nearly as effective as, say, the Polio (three doses are 99% to 100% effective), Small Pox (95%) or Measles (93%-97%, depending on how many doses), BUT "those Liberals" are partially correct to assert some effectiveness. "We Conservatives" are also correct to advocate "Personal Responsibility" measures of good diet and lifestyle and supplements, as appropriate, and after consultation with one's medical professional.
